Aqua-Stadia LSR

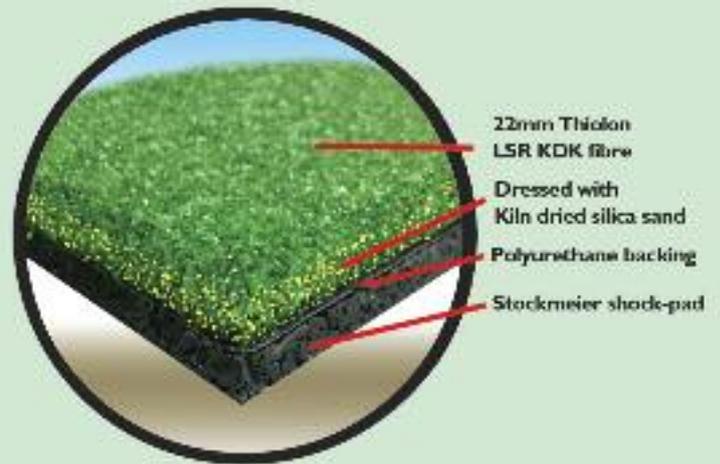

Eagleturf Aqua-Stadia LSR is a FIH-approved global standard hockey wet field designed for international competitions. The product is made from 12mm of Thiolon 7300 denier KDK polyethylene yarn from Holland, which is adhered to a German Stockmeier rubber shock-pad. EagleTurf Aqua-Stadia is designed to give a fast and smooth ball roll while offering long-term safety / cushion to players. The Eagleturf triple backing system means the fibre is locked-in for a longer life turf.

Hybrid-Stadia LSR

Eagleturf Hybrid-Stadia LSR is a FIH-approved hockey "dressed" field designed for some international and national competitions. The product is made from 22mm of "sand-dressed" Thiolon 7300 denier KDK polyethylene yarn from Holland, which is attached to a German Stockmeier rubber shock-pad. EagleTurf Hybrid-Stadia is designed to give a great performance for hockey, soccer and tennis while offering long-term safety / cushion to players, yet needs no water at all. The Eagleturf triple backing system means the fibre is locked-in for a longer life turf.

Eagleturf International Limited is a global manufacturer, contractor and installer of synthetic turf systems.

We manufacture products for hockey in 3 continents, using only the highest quality of materials installed by our experienced and qualified team.

Eagleturf has the unique innovation and technology with which we lead the market. Eagleturf is designed by hockey players, for hockey players!
